- Installation and Painting of Reinforced Foundations
- Machinery Installation
- Millwright and Precision Alignment Services
- Custom Metal Fabrication
- Machinery Ducting and Custom Hoods
- Installation of Wiring, Air and Water Connections
- Certification of Proper Machine Operation

RECENT PROJECT

MACHINERY INSTALLATION AND RELOCATION IN 1,000,000-SF. FACILITY EAST PEORIA, IL

A long-term Kroeschell client has an ongoing need for new machinery to be installed and old machines to be relocated within a 1-million-sf. facility. The machines account for nearly 95% of the total production facility onsite. Work for this project has included laying and painting foundations, safely delivering and placing machines, installing wiring, air, and water connections, and ensuring proper operation while safely and efficiently relocating or removing old machinery.

Machinery has been installed in half the time of other contractors, saving money and allowing our client to start production more quickly.
